## AIPMT

### Question Paper with Solution

# 2008

99. Which of the following statements is not true?

- (1) Natural rubber is a 1, 4 - polymer of isoprene
- (2) In vulcanization, the formation of sulphur bridges between different chains make rubber harder and stronger
- (3) Natural rubber has the trans-configuration at every double bond
- (4) Buna-S is a copolymer of butadiene and styrene

Sol. Answer (3)

Natural rubber has cis-configuration at each double bond.

Gutta-Percha has trans-configuration of each double bond.

100. Which one of the following is an amine hormone?

- (1) Progesterone
- (2) Thyroxine
- (3) Oxypurin
- (4) Insulin

Sol. Answer (2)

Thyroxine-derived from tyrosine amino acid.

Insulin - Polypeptide.

Progesterone - Steroid hormone.

101. Select one of the following of important features distinguishing Gnetum from Cycas and Pinus and showing affinities with angiosperms

- (1) Embryo development and apical meristem
- (2) Absence of resin duct and leaf venation
- (3) Presence of vessel elements and absence of archegonia
- (4) Perianth and two integuments

Sol. Answer (3)

Members of order Gnetales possess vessels and show absence of archegonia.

102. Thermococcus, Methanococcus and Methanobacterium exemplify

- (1) Bacteria that contain a cytoskeleton and ribosomes
- (2) Archaeobacteria that contain protein homologous to eukaryotic core histones
- (3) Archaeobacteria that lack any histones resembling those found in eukaryotes but

whose DNA is negatively supercoiled

(4) Bacteria whose DNA is relaxed or positively supercoiled but which have a cytoskeleton as well as mitochondria

Sol. Answer (3)

Archaeobacteria have -ve supercoiled DNA but histones are chemically different in composition from eukaryotes.

103. Which one of the following is heterosporous?

- (1) Equisetum
- (2) Dryopteris
- (3) Salvinia
- (4) Adiantum

Sol. Answer (3)

Others are homosporous pteridophytes.

104. In which one of the following male and female gametophytes do not have free living independent existence?

- (1) Cedrus
- (2) Pteris
- (3) Funaria
- (4) Polytrichum

Sol. Answer (1)

Cedrus is gymnosperm having reduced dependent gametophytes as pollen and endosperm.

105. Which one of the following groups of three animals each is correctly matched with their one characteristic morphological feature?

<b>Animals</b>	<b>Morphological feature</b>
(1) Cockroach, Locust, Taenia	- Metameric segmentation
(2) Liver fluke, Sea anemone, Sea cucumber	- Bilateral symmetry
(3) Centipede, Prawn, Sea urchin	- Jointed appendages
(4) Scorpion, Spider, Cockroach	- Ventral solid central nervous system

Sol. Answer (4)

106. Which one of the following phyla is correctly matched with its two general characteristics?

- (1) Mollusca - Normally oviparous and development through a trochophore or veligerlarva
- (2) Arthropoda - Body divided into head, thorax and abdomen and respiration by tracheae
- (3) Chordata - Notochord at some stage and separate anal and urinary openings to the outside
- (4) Echinodermata - Pentamerous radial symmetry and mostly internal fertilization

Sol. Answer (1)

107. Which one of the following in birds, indicates their reptilian ancestry?

- (1) Eggs with a calcareous shell
- (2) Scales on their hind limbs
- (3) Four-chambered heart
- (4) Two special chambers crop and gizzard in their digestive tract

Sol. Answer (2)

108. Ascaris is characterized by

- (1) Presence of true coelom and metamerism (metamerisation)
- (2) Absence of true coelom but presence of metamerism
- (3) Presence of neither true coelom nor metamerism
- (4) Presence of true coelom but absence of metamerism

Sol. Answer (3)

109. Which one of the following is not a characteristic of phylum Annelida?

- (1) Ventral nerve cord
- (2) Closed circulatory system
- (3) Segmentation
- (4) Pseudocoelom

Sol. Answer (4)

110. Cellulose is the major component of cell walls of

- (1) Saccharomyces
- (2) Pythium
- (3) Xanthomonas
- (4) Pseudomonas

Sol. Answer (2)

Pythium is a phycomycetes member having cellulosic cell wall.

Xanthomonas and Pseudomonas are Eubacteria having peptidoglycan cell wall.

Saccharomyces - Chitinous cell wall.

111. Vacuole in a plant cell

- (1) Lacks membrane and contains water and excretory substances
- (2) Is membrane-bound and contains storage proteins and lipids
- (3) Is membrane-bound and contains water and excretory substances
- (4) Lacks membrane and contains air

Sol. Answer (3)

It is having tonoplast as membrane and stores water and excretory substances.

112. A competitive inhibitor of succinic dehydrogenase is

- (1) Malate
- (2) Malonate
- (3) Oxaloacetate
- (4)  $\alpha$ - ketoglutarate

Sol. Answer (2)

Malonate competes with succinate for active sites of succinate dehydrogenase.

113. Polysome is formed by

- (1) Ribosomes attached to each other in a linear arrangement
- (2) Several ribosomes attached to a single mRNA
- (3) Many ribosomes attached to a strand of endoplasmic reticulum
- (4) A ribosome with several subunits

Sol. Answer (2)

This structure appears during protein synthesis in cytoplasm to translate different parts of a polypeptide.

114. Carbohydrates are commonly found as starch in plant storage organs. Which of the following five properties of starch (a - e) make it useful as a storage material?

- a. Easily translocated
- b. Chemical non-reactive
- c. Easily digested by animals
- d. Osmotically inactive
- e. Synthesized during photosynthesis

The useful properties are

- (1) Both a & e
- (2) Both b & c
- (3) Both b & d
- (4) a, c & e

Sol. Answer (3)

Starch is nonreducing and water insoluble so is preferred as storage material.

115. In the light of recent classification of living organisms into three domains of life (bacteria, archaea and eukarya), which one of the following statements is true about archaea?

- (1) Archaea completely differ from prokaryotes
- (2) Archaea resemble eukarya in all respects
- (3) Archaea have some novel features that are absent in other prokaryotes and eukaryotes
- (4) Archaea completely differ from both prokaryotes and eukaryotes

Sol. Answer (3)

Archea have primitive forms with histones, no organized nucleus, membrane bound organelles absent and proteinous and noncellulosic carbohydrate nature of cell wall.

116. Keeping in view the 'fluid mosaic model' for the structure of cell membrane, which one of the following statements is correct w.r.t. the movement of lipids and proteins from one lipid monolayer to the other (described as flip-flop movement)?

- (1) Neither lipids nor proteins can flip-flop
- (2) Both lipids and proteins can flip-flop
- (3) While lipids can rarely flip-flop, proteins cannot
- (4) While proteins can flip-flop, lipids cannot

Sol. Answer (3)

It is exclusive property of lipids shown during changing temperature of cellular

environment.

117. In germinating seeds fatty acids are degraded exclusively in the

- (1) Mitochondria
- (2) Proplastids
- (3) Glyoxysomes
- (4) Peroxisomes

Sol. Answer (3)

It is regulated by glyoxylate cycle.

118. The two sub-units of ribosome remain united at a critical ion level of

- (1) Calcium
- (2) Copper
- (3) Manganese
- (4) Magnesium

Sol. Answer (4)

Magnesium concentration is 0.0001 M.

119. Thorn of Bougainvillea and tendril of cucurbita are example of

- (1) Retrogressive evolution
- (2) Analogous organs
- (3) Homologous organs
- (4) Vestigial organs

Sol. Answer (3)

120. Haploids are more suitable for mutation studies than the diploids. This is because

- (1) All mutations, whether dominant or recessive are expressed in haploids
- (2) Haploids are reproductively more stable than diploids
- (3) Mutagens penetrate in haploids more effectively than diploids
- (4) Haploids are more abundant in nature than diploids

Sol. Answer (1)

Haploids have only one set of chromosome hence alleles.

121. Which one of the following pairs of nitrogenous bases of nucleic acids, is wrongly matched with the category mentioned against it?

- (1) Adenine, Thymine - Purines
- (2) Thymine, Uracil - Pyrimidines
- (3) Uracil, Cytosine - Pyrimidines
- (4) Guanine, Adenine - Purines

Sol. Answer (1)

Adenine and guanine are purines, whereas, Uracil, Thymine, Cytosine are pyrimidines.

122. Which one of the following conditions in humans is correctly matched with its chromosomal abnormality/ linkage?

- (1) Down syndrome - 44 autosomes + XO
- (2) Klinefelter syndrome - 44 autosomes + XXY
- (3) Colour blindness - Y-linked

(4) Erythroblastosis foetalis - X-linked

Sol. Answer (2)

Downs syndrome - 45 + XX or 45 + XY

123. In the DNA molecules

- (1) There are two strands which run antiparallel-one in 5' →3' direction and other in 3' → 5'
- (2) The total amount of purine nucleotides and pyrimidine nucleotides is not always equal
- (3) There are two strands which run parallel in the 5' →3' direction
- (4) The proportion of Adenine in relation to thymine varies with the organism

Sol. Answer (1)

The 2 strands of DNA are antiparallel one in 5' - 3' direction and the other in 3' - 5' direction.

124. What is true about the isolated small tribal populations?

- (1) There is no change in population size as they have a large gene pool
- (2) There is a decline in population as boys marry girls only from their own tribe
- (3) Hereditary diseases like colour blindness do not spread in the isolated population
- (4) Wrestlers who develop strong body muscles in their life time pass this character on to their progeny

Sol. Answer (2)

The acquired character such as strong muscles of a wrestler obtained by regular exercise will not be transmitted to the next generation. Gene pool of a population will consist of a large number of genes which will vary in their frequencies. These frequencies also depend on proportion of various genotypes in the total population. Small tribal population will have small gene pool.

Hereditary diseases like colour blindness will spread in isolated population due to inbreeding.

There is a decline in population as boys marry girls only from their own tribe, this is due to absence of gene migration/gene flow.

125. Which one of the following scientist's name is correctly matched with the theory put forth by him?

- (1) Mendel - Theory of Pangenesis
- (2) Weismann - Theory of continuity of Germplasm
- (3) Pasteur - Inheritance of acquired characters
- (4) de Vries - Natural selection

Sol. Answer (2)

Following are the right matching pairs.

de Vries - Mutation theory

Darwin - Theory of pangenesis and Natural selection

Pasteur - Discarded the theory of spontaneous generation of life and proved that life arises from pre-existing life.

126. Which one of the following is incorrect about the characteristics of protobionts (coacervates and micropheres) as envisaged in the abiogenic origin of life?

- (1) They could maintain an internal environment
- (2) They were able to reproduce
- (3) They could separate combinations of molecules from the surroundings
- (4) They were partially isolated from the surroundings

Sol. Answer (2)

According to recent literature, coacervates and microspheres do not reproduce.

127. Darwin's Finches are an excellent example of

- (1) Connecting links
- (2) Adaptive radiation
- (3) Seasonal migration
- (4) Brood parasitism

Sol. Answer (2)

Darwin's Finches are examples of evolutionary divergence giving rise to new species, arising from one common ancestor, depending upon the habitat.

128. Which one of the following pairs of items correctly belongs to the category of organs mentioned against it?

- (1) Wings of honey-bee and wings of crow - Homologous organs
- (2) Thorn of Bougainvillea and tendrils of Cucurbita - Analogous organs
- (3) Nictitating membrane and blind spot in human eye - Vestigial organs
- (4) Nephridia of earthworm and Malpighian tubules of cockroach - Excretory organs

Sol. Answer (4)

Wings of honey bee and the wings of crow are analogous.

Thorn of Bougainvillea and tendrils of Cucurbita are homologous.

Blind spot in humans represents the point where the optic nerve will leave the eye ball so it is not vestigial.

129. The fruit is chambered, developed from inferior ovary and has seeds with succulent testa in

- (1) Cucumber
- (2) Pomegranate
- (3) Orange
- (4) Guava

Sol. Answer (2)

This forms edible part of pomegranate.

130. The  $C_4$  plants are photosynthetically more efficient than  $C_3$  plants because

- (1) They have more chloroplasts
- (2) The  $CO_2$  compensation point is more
- (3)  $CO_2$  generated during photorespiration is trapped and recycled through PEP carboxylase
- (4) The  $CO_2$  efflux is not prevented

Sol. Answer (1)

$C_4$  plants do not show photorespiration and have more chloroplast in bundle sheath.

131. The chemiosmotic coupling hypothesis of oxidative phosphorylation proposes that adenosine triphosphate (ATP) is formed because

- (1) There is a change in the permeability of the inner mitochondrial membrane toward adenosine diphosphate (ADP)
- (2) High energy bonds are formed in mitochondrial proteins
- (3) ADP is pumped out of the matrix into the intermembrane space
- (4) A proton gradient forms across the inner membrane

Sol. Answer (4)

Proton motive force develop between perimitochondrial space and matrix across inner mitochondrial membrane.

132. Dry indehiscent single-seeded fruit formed bicarpellary syncarpous inferior ovary is

- (1) Cremocarp
- (2) Caryopsis
- (3) Cypsela
- (4) Berry

Sol. Answer (3)

Cypsela —Asteraceae.

Cremocarp —Shizocarpic fruit, as in umbelliferae.

Caryopsis —Indehiscent fruit formed from monocarpellary and superior ovary with basal placentation.

133. The rupture and fractionation do not usually occur in the water column in vessel/tracheids during the ascent of sap because of

- (1) Transpiration pull
- (2) Lignified thick walls
- (3) Cohesion and adhesion
- (4) Weak gravitational pull

Sol. Answer (3)

Continuity of water column is maintained by cohesion and adhesion.

134. Senescence as an active developmental cellular process in the growth and functioning of a flowering plant, is indicated in

- (1) Floral parts
- (2) Vessels and tracheid differentiation
- (3) Leaf abscission
- (4) Annual plants

Sol. Answer (3)

Abscission provides nutrient movement and rejuvenation of plant.

135. Vascular tissues in flowering plants develop from

- (1) Dermatogen
- (2) Phellogen
- (3) Plerome
- (4) Periblem

Sol. Answer (3)

Periblem —Ground tissue

Phellogen —Cork cambium

Dermatogen —Epidermis

136. In leaves of C<sub>4</sub> plants malic acid synthesis during CO<sub>2</sub> fixation occurs in

- (1) Guard cells
- (2) Epidermal cells
- (3) Mesophyll cells
- (4) Bundle sheath

Sol. Answer (3)

Bundle sheath malic acid is transported from mesophylls.

137. Importance of day length in flowering of plants was first shown in

- (1) Petunia
- (2) Lemna
- (3) Tobacco
- (4) Cotton

Sol. Answer (3)

Discovered by Garner & Allard in a Maryland mammoth variety of tobacco.

138. Endosperm is consumed by developing embryo in the seed of

- (1) Maize
- (2) Coconut
- (3) Castor
- (4) Pea

Sol. Answer (4)

Other three are endospermic/albuminous seeds.

139. Nitrogen fixation in root nodules of *Alnus* is brought about by

- (1) Azorhizobium
- (2) Bradyrhizobium
- (3) Clostridium
- (4) Frankia

Sol. Answer (4)

Frankia is actinomycete.

Bradyrhizobium —Root nodules in soyabean.

140. The energy releasing process in which the substrate is oxidised without an external electron acceptor is called

- (1) Glycolysis
- (2) Fermentation
- (3) Photorespiration
- (4) Aerobic respiration

Sol. Answer (2)

Fermentation consumes  $\text{NADH}_2$  and  $e^-$  acceptor is released as  $\text{NAD}^+$  not used. While glycolysis uses external  $e^-$  acceptor as  $\text{NAD}^+$ .

141. Replum is present in the ovary of flower of

- (1) Pea
- (2) Lemon
- (3) Mustard
- (4) Sunflower

Sol. Answer (3)

Mustard (Brassicaceae) possess false septum in ovary having parietal placentation.

142. The fleshy receptacle of syconus of fig encloses a number of

- (1) Mericarps
- (2) Achenes
- (3) Samaras
- (4) Berries

Sol. Answer (2)

Syconus is fruit type in fig which is composed of many acheneal fruitlets.

143. Electrons from excited chlorophyll molecule of photosystem II are accepted first by

- (1) Ferredoxin
- (2) Cytochrome - b
- (3) Cytochrome - f
- (4) Quinone

Sol. Answer (4)

Plastoquinone is used as mobile carrier and primary electron acceptor from PS II.

144. Which type of white blood cells are concerned with the release of histamine and the natural anticoagulant heparin?

- (1) Monocytes
- (2) Neutrophils
- (3) Basophils
- (4) Eosinophils

Sol. Answer (3)

Basophils have a function similar to mast cells. So both basophils and mast cells contain heparin, histamine and serotonin.

145. Which one of the following is the true description about an animal concerned?

- (1) Cockroach - 10 pairs of spiracles (2 pairs on thorax and 8 pairs on abdomen)
- (2) Earthworm - The alimentary canal consists of a sequence of pharynx, oesophagus, stomach, gizzard and intestine
- (3) Frog - Body divisible into three regions - head, neck and trunk
- (4) Rat - Left kidney is slightly higher in position than the right one

Sol. Answer (1)

In rat right kidney is slightly higher than left because all the organs are concentrated

towards left, only in human beings left kidney is higher. In earthworm the correct sequence of alimentary canal is pharynx, oesophagus, gizzard, stomach and intestine. In Frog, neck is absent.

146. Which one of the following is the correct matching of the site of action on the given substrate, the enzyme acting upon it and the end product?

- (1) *Stomach* : Fats  $\xrightarrow{\text{Lipase}}$  micelles  
 (2) *Duodenum* : Triglycerides  $\xrightarrow{\text{Trypsin}}$  monoglycerides  
 (3) *Small intestine* : Starch  $\xrightarrow{\alpha\text{-Amylase}}$  Disaccharide (Maltose)  
 (4) *Small intestine* : Proteins  $\xrightarrow{\text{Pepsin}}$  Amino acids

Sol. Answer (3)

Pancreatic juice is released in intestine & contains, Pancreatic  $\alpha$ -amylase, also called as Amylopsin, it digests 70% of the starch converting it into Maltose, Isomaltose and limit dextrans.

147. What is vital capacity of our lungs?

- (1) Total lungs capacity minus residual volume  
 (2) Inspiratory reserve volume plus tidal volume  
 (3) Total lungs capacity minus expiratory reserve volume  
 (4) Inspiratory reserve volume plus expiratory reserve volume

Sol. Answer (1)

Vital capacity = TV + IRV + ERV

Total lung capacity = VC + RV

So we can say that VC = Total lung capacity - Residual volume.

148. Which one of the following is the correct difference between Rod Cells and Cone Cells of our retina?

	<b>Rod Cells</b>	<b>Cone Cells</b>
(1) Distribution	More concentrated in centre of retina	Evenly distributed all over retina
(2) Visual acuity	High	Low
(3) Visual pigment contained	Iodopsin	Rhodopsin
(4) Overall function	Vision in poor light	Colour vision and detailed vision in bright light

Sol. Answer (4)

Rod cells are more concentrated towards the periphery. Visual acuity is highest in fovea centralis which contains only cones. Visual pigment in rods cells is rhodopsin, whereas in the cone cells it is iodopsin.

149. Which one of the following items gives its correct total number?

- (1) Cervical vertebrae in humans - 8  
 (2) Floating ribs in humans - 4

(3) Amino acids found in proteins - 16

(4) Types of diabetes - 3

Sol. Answer (2)

In human beings floating ribs are 2 pairs (4), i.e. 11<sup>th</sup> and 12<sup>th</sup> ribs.

150. Given below is a diagrammatic cross section of a single loop of human cochlea

Which one of the following options correctly represents the names of three different parts?

- (1) A : Perilymph, B : Tectorial membrane, C : Endolymph
- (2) B : Tectorial membrane, C : Perilymph, D : Secretory cells
- (3) C : Endolymph, D : Sensory hair cells, A : Serum
- (4) D : Sensory hair cells, A : Endolymph, B : Tectorial membrane

Sol. Answer (1)

In the diagram of human cochlea.

- A. represents - Perilymph
- B. represents - Tectorial membrane
- C. represents - Endolymph
- D. represents - Sensory cells

151. Given below are four methods (A - D) and their modes of action (a - d) in achieving contraception. Select their correct matching from the four options that follow

Method	Mode of Action
(A) The pill	(a) Prevents sperms reaching cervix
(B) Condom	(b) Prevents implantation
(C) Vasectomy	(c) Prevents ovulation
(D) Copper T	(d) Semen contains no sperms

Matching

- (1) A-(b), B-(c), C-(a), D-(d)
- (2) A-(c), B-(a), C-(d), D-(b)
- (3) A-(d), B-(a), C-(b), D-(c)
- (4) A-(c) B-(d), C-(a), D-(b)

Sol. Answer (2)

Oral contraceptive pills contain estrogen and progesterone hormones, so they alter the ovulatory cycle and mainly prevent ovulation. Condoms are physical barrier, they prevent the sperms reaching cervix. Vasectomy is the surgical and terminal method of birth control in males. They do not prevent sperm production, but hinder sperm transport so the

semen will not contain any sperms. IUDS e.g. Copper-T prevent fertilization and mainly implantation.

152. What will happen if the secretion of parietal cells of gastric glands is blocked with an inhibitor?

- (1) Enterokinase will not be released from the duodenal mucosa and so trypsinogen is not converted to trypsin
- (2) Gastric juice will be deficient in chymosin
- (3) Gastric juice will be deficient in pepsinogen
- (4) In the absence of HCl secretion, inactive pepsinogen is not converted into the active enzyme pepsin.

Sol. Answer (4)

Parietal cells/oxynitic cells, their function is to secrete HCl and Castle's intrinsic factor. Pepsinogen, is converted into active pepsin by HCl, i.e. by change in pH.

153. During the propagation of a nerve impulse, the action potential results from the movement of

- (1)  $\text{Na}^+$  ions from extracellular fluid to intracellular fluid
- (2)  $\text{K}^+$  ions from extracellular fluid to intracellular fluid
- (3)  $\text{Na}^+$  ions from intracellular fluid to extracellular fluid
- (4)  $\text{K}^+$  ions from intracellular fluid to extracellular fluid

Sol. Answer (1)

When the threshold stimulus is applied, the permeability of the membrane for sodium ions will change. Voltage gated sodium ion channels open and  $\text{Na}^+$  ion flows from extracellular fluid to intracellular fluid, the outside becomes negative and inside positive. The membrane is depolarised & when the two ends of this membrane is connected to oscilloscope a potential difference of + 30 mv, called as action potential is generated.

154. The blood calcium level is lowered by the deficiency of

- (1) Calcitonin
- (2) Parathormone
- (3) Thyroxine
- (4) Both Calcitonin and Parathormone

Sol. Answer (2)

155. The most active phagocytic white blood cells are

- (1) Neutrophils and monocytes
- (2) Neutrophils and eosinophils
- (3) Lymphocytes and macrophages
- (4) Eosinophils and lymphocytes

Sol. Answer (1)

Neutrophils and monocytes have phagocytic function.

156. Earthworms have no skeleton but during burrowing, the anterior end becomes turgid and acts as a hydraulic skeleton. It is due to

- (1) Setae
- (2) Coelomic fluid

- (3) Blood
- (4) Gut peristalsis

Sol. Answer (2)

Setae help in attachment, but turgidity and hydraulic skeleton is due to coelomic fluid.

157. In humans, blood passes from the post caval to the diastolic right atrium of heart due to

- (1) Pressure difference between the post caval and atrium
- (2) Pushing open of the venous valves
- (3) Suction pull
- (4) Stimulation of the sino auricular node

Sol. Answer (1)

Blood always flows from higher pressure towards the lower pressure.

158. In humans, at the end of the first meiotic division, the male germ cells differentiate into the

- (1) Spermatozoa
- (2) Primary spermatocytes
- (3) Secondary spermatocytes
- (4) Spermatids

Sol. Answer (3)

After the first meiotic division primary spermatocytes divide to form secondary spermatocytes. Whereas, after second meiotic division secondary spermatocytes will divide to form spermatids.

159. Which one of the following is resistant to enzyme action?

- (1) Leaf cuticle
- (2) Cork
- (3) Wood fibre
- (4) Pollen exine

Sol. Answer (4)

**Pollen exine** : It is formed of sporopollenin which is resistant to microbial, physical and chemical decomposition. Due to presence of sporopollenin, pollens can be preserved for longer period of time in fossil form. Sporopollenin is formed after the oxidative polymerisation of carotenoids.

160. The length of different internodes in a culm of sugarcane is variable because of

- (1) Intercalary meristem
- (2) Shoot apical meristem
- (3) Position of axillary buds
- (4) Size of leaf lamina at the node below each internode

Sol. Answer (1)

Intercalary meristem : They are remains of apical meristem between permanent tissues and internodes; responsible for primary growth of the plant.

161. Which one of the following pairs of plant structures has haploid number of

chromosomes?

- (1) Egg nucleus and secondary nucleus
- (2) Megaspore mother cell and antipodal cells
- (3) Egg cell and antipodal cells
- (4) Nucellus and antipodal cells

Sol. Answer (3)

Egg cell and antipodal cells : They are part of the female gametophyte.

162. What does the filiform apparatus do at the entrance into ovule?

- (1) It guides pollen tube from a synergid to egg
- (2) It helps in the entry of pollen tube into a synergid
- (3) It prevents entry of more than one pollen tube into the embryo sac
- (4) It brings about opening of the pollen tube

Sol. Answer (2)

It helps in the entry of pollen tube into synergid : Filiform apparatus is present at the micropylar end in synergid. It is a mass of finger like projections. It releases certain chemical substances which direct the path of pollen tube inside the synergid through micropyle (chemotropic effect)

163. Unisexuality of flowers prevents

- (1) Autogamy and geitonogamy
- (2) Autogamy, but not geitonogamy
- (3) Both geitonogamy and xenogamy
- (4) Geitonogamy, but not xenogamy

Sol. Answer (2)

Autogamy but not geitonogamy : Unisexuality promotes or favours the cross pollination (xenogamy) and prevent self pollination (Autogamy). Geitonogamy involve transfer of pollen grain between two flowers of the same plant so unisexuality will not prevent geitonogamy.

164. Which extraembryonic membrane in humans prevents desiccation of the embryo inside the uterus?

- (1) Amnion
- (2) Chorion
- (3) Allantois
- (4) Yolk sac

Sol. Answer (1)

Amnion encloses amniotic fluid which prevents desiccation of embryo, that's why present in all true land vertebrates.

165. Which one of the following statements is incorrect about menstruation?

- (1) The beginning of the cycle of menstruation is called menarche
- (2) During normal menstruation about 40 ml blood is lost
- (3) The menstrual fluid can easily clot
- (4) At menopause in the female, there is especially abrupt increase in gonadotropic hormones

Sol. Answer (3)

Menopause is a senile change in ovaries. After menopause the level of pituitary gonadotropins remain same or slightly increase. FSH is more than LH; but the ovaries are not responding to these hormone, because all the ovarian follicles are converted into follicular atresia. There is decline in the level of progesterone and estrogen. Initially the blood inside the uterus clots, but it is liquefied by the enzyme plasmin released by uterus. Menstrual fluid which is discharged cannot clot again.

166. The haemoglobin of a human foetus

- (1) Has a higher affinity for oxygen than that of an adult
- (2) Has a lower affinity for oxygen than that of the adult
- (3) Its affinity for oxygen is the same as that of an adult
- (4) Has only 2 protein subunits instead of 4

Sol. Answer (1)

The haemoglobin of human foetus (HbF) has 4 Heme group and 1 globin. In HbF the globin protein is made up of 2  $\alpha$  and 2  $\beta$  polypeptide chains. Each  $\alpha$  has 141 amino acids and each  $\beta$  has 146 amino acids but 37 amino acids in each  $\beta$  are different from that of HbA. It has higher affinity for O<sub>2</sub> even at low PO<sub>2</sub> and the oxygen-Hb dissociation curve remains towards the left of normal.

167. Consider the statements given below regarding contraception and answer as directed thereafter

- (a) Medical Termination of Pregnancy (MTP) during first trimester is generally safe
  - (b) Generally chances of conception are nil until mother breast-feeds the infant upto two years
  - (c) Intrauterine devices like copper-T are effective contraceptives
  - (d) Contraception pills may be taken upto one week after coitus to prevent conception
- Which two of the above statements are correct?

- (1) a, b
- (2) b, c
- (3) c, d
- (4) a, c

Sol. Answer (4)

During intense lactational period the chances of conception are almost nil, maximum upto six months and not two years.

After unwanted sexual intercourse, conception can be avoided by taking contraceptive pills within 72 hrs.

168. In human adult females oxytocin

- (1) Causes strong uterine contractions during parturition
- (2) Is secreted by anterior pituitary
- (3) Stimulates growth of mammary glands
- (4) Stimulates pituitary to secrete vasopressin

Sol. Answer (1)

Oxytocin is called as Birth Hormone as it causes the contraction of smooth muscles of the

uterus leading to the birth of the child.

169. Which one of the following is the correct percentage of the two (out of the total of 4) green house gases that contribute to the total global warming?

- (1) Methane 20%, N<sub>2</sub>O 18%
- (2) CFCs 14%, Methane 20%
- (3) CO<sub>2</sub> 40%, CFSs 30%
- (4) N<sub>2</sub>O 6%, CO<sub>2</sub> 86%

Sol. Answer (2)

CFC 14%, methane 20% : For CO<sub>2</sub> it is 60% and for N<sub>2</sub>O it is 6%

170. Quercus species are the dominant component in

- (1) Tropical rain forests
- (2) Temperate deciduous forests
- (3) Alpine forests
- (4) Scrub forests

Sol. Answer (2)

Temperate deciduous forest

Tropical rain forest - Dipterocarpus, Hopea

Scrub forest - Oak, Eucalyptus

Alpine forest - Rhododendron, Juniperus

171. About 70% of total global carbon is found in

- (1) Forests
- (2) Grasslands
- (3) Agroecosystems
- (4) Oceans

Sol. Answer (4)

Oceans : For the C, cycling pool consists of  $6 \times 10^{14}$  kg (29%) of free CO<sub>2</sub> in the atmosphere and  $1.45 \times 10^{15}$  kg (71%) dissolved CO<sub>2</sub> in hydrosphere.

172. Which one of the following is not observed in biodiversity hotspots?

- (1) Species richness
- (2) Endemism
- (3) Accelerated species loss
- (4) Lesser inter-specific competition

Sol. Answer (4)

Lesser inter-specific competition : Due to the presence of high species diversity the inter specific competition will be more enhanced.

173. World summit on Sustainable Development (2002) was held in

- (1) South Africa
- (2) Brazil
- (3) Sweden
- (4) Argentina

Sol. Answer (1)

It was held in South Africa (Johnnesberg)

174. The slow rate of decomposition of fallen logs in nature is due to their

- (1) Low cellulose content
- (2) Low moisture content
- (3) Poor nitrogen content
- (4) Anaerobic environment around them

Sol. Answer (2)

Low moisture content will lead to decrease in number of decomposers, because decomposers require an optimum moisture for their proper growth and functioning.

175. Consider the following statements concerning food chains

- (a) Removal of 80% tigers from an area resulted in greatly increased growth of vegetation
- (b) Removal of most of the carnivores resulted in an increased population of deers
- (c) The length of food chains is generally limited to 3-4 trophic levels due to energy loss
- (d) The length of food chains may vary from 2 to 8 trophic levels.

Which two of the above statements are correct?

- (1) a, b
- (2) b, c
- (3) c, d
- (4) a, d

Sol. Answer (2)

Removal of tigers from an area will lead to an increase in number of herbivores and hence there will be decreased growth of vegetation in that particular area. The number of trophic levels in a food chain does not reach 8 rather there are 3 or 4 trophic levels.

176. According to Central Pollution Control Board (CPCB), which particulate size in diameter (in micrometers) of

the air pollutants is responsible for greatest harm to human health?

- (1) 5.2 - 2.5
- (2) 2.5 or less
- (3) 1.5 or less
- (4) 1.0 or less

Sol. Answer (2)

This is the report of Central Pollution Control Board.

177. The table below gives the populations (in thousands) of ten species (A - J) in four areas (a - d) consisting of the number of habitats given within brackets against each.

Study the table and answer the question which follows

Area and Number of habitats	Species, and their populations (in thousands) in the areas									
	A	B	C	D	E	F	G	H	I	J
a (11)	2.3	1.2	0.52	6.0	-	3.1	1.1	9.0	-	10.3

b (11)	10.2	–	0.62	–	1.5	3.0	–	8.2	1.1	11.2
c (13)	11.3	0.9	0.48	2.4	1.4	4.2	0.8	8.4	2.2	4.1
d (12)	3.2	10.2	11.1	4.8	0.4	3.3	0.8	7.3	11.3	2.1

Which area out of a to d shows maximum species diversity?

- (1) a
- (2) b
- (3) c
- (4) d

Sol. Answer (4)

In areas 'c' and 'd' all the 10 species are present but number of habitats is lesser in area d.

178. A lake near a village suffered heavy mortality of fishes within a few days. Consider the following reasons for this

- (a) Lots of urea and phosphate fertilizer were used in the crops in the vicinity
- (b) The area was sprayed with DDT by an aircraft
- (c) The lake water turned green and stinky
- (d) Phytoplankton populations in the lake declined initially thereby greatly reducing photosynthesis

Which two of the above were the main causes of fish mortality in the lake?

- (1) a, b
- (2) b, c
- (3) c, d
- (4) a, c

Sol. Answer (4)

Lots of urea and phosphate fertilizers used in crops in the vicinity of lake will lead to eutrophication that means the lake will turn green and stinky.

179. Consider the following four statements (a - d) about certain desert animals such as kangaroo rat.

- (a) They have dark colour and high rate of reproduction and excrete solid urine
- (b) They do not drink water, breathe at a slow rate to conserve water and have their body covered with thick hairs
- (c) They feed on dry seeds and do not require drinking water
- (d) They excrete very concentrated urine and do not use water to regulate body temperature

Which two of the above statements for such animals are true?

- (1) a and b
- (2) c and d
- (3) b and c
- (4) c and a

Sol. Answer (2)

Kangaroo rat is the only mammal which does not ingest any water and remains only on metabolic water which it can utilize due to nasal counter current mechanism. It feeds on dry castor seeds. Sweat glands are absent and secrete concentrated urine with nitrogenous

waste as urea.

180. A transgenic food crop which may help in solving the problem of night blindness in developing countries is

- (1) Golden rice
- (2) Flavr Savr tomatoes
- (3) Starlink maize
- (4) Bt Soybean

Sol. Answer (1)

Golden rice is transgenic rice in which the genes for synthesis of enzymes involved in  $\beta$ -carotene formation are transferred. So golden rice is rich in vitamin A, preventing night blindness.

181. Bacterial leaf blight of rice is caused by a species of

- (1) Erwinia
- (2) Xanthomonas
- (3) Pseudomonas
- (4) Alternaria

Sol. Answer (2)

Xanthomonas oryzae.

182. Which one of the following is linked to the discovery of Bordeaux mixture as a popular fungicide?

- (1) Black rust of wheat
- (2) Bacterial leaf blight of rice
- (3) Downy mildew of grapes
- (4) Loose smut of wheat

Sol. Answer (3)

It was discovered by Professor Millardet of Bordeaux University of France.

183. Which one of the following is being tried in India as a biofuel substitute for fossil fuels?

- (1) Aegilops
- (2) Jatropha
- (3) Azadirachta
- (4) Musa

Sol. Answer (2)

It is a petroplant and the source of fuel is latex.

184. Trichoderma harzianum has proved a useful microorganism for

- (1) Biological control of soil-borne plant pathogens
- (2) Bioremediation of contaminated soils
- (3) Reclamation of wastelands
- (4) Gene transfer in higher plants

Sol. Answer (1)

It secretes chitinase enzyme which is responsible for antifungal activities.

185. Gel electrophoresis is used for

- (1) Isolation of DNA molecule
- (2) Cutting of DNA into fragments
- (3) Separation of DNA fragments according to their size
- (4) Construction of recombinant DNA by joining with cloning vectors

Sol. Answer (3)

After the action of restriction endonuclease the fragments of DNA so formed are separated by gel electrophoresis. This technique is based upon the principle of separation of molecules on the basis of charge and mass.

186. To which type of barriers under innate immunity, do the saliva in the mouth and the tears from the eyes, belong?

- (1) Physical barriers
- (2) Cytokine barriers
- (3) Cellular barriers
- (4) Physiological barriers

Sol. Answer (4)

Acid in stomach, saliva in mouth, tears from eyes all prevent microbial growth. They are part of innate immunity and grouped under physiological barriers.

187. Match the disease in Column I with the appropriate items (pathogen/prevention/treatment) in Column II

	Column I		Column II
(a)	Amoebiasis	(i)	Treponema palladium
(b)	Diphtheria	(ii)	Use only sterilized food and water
(c)	Cholera	(iii)	DPT Vaccine
(d)	Syphilis	(iv)	Use oral rehydration therapy

- (1) a-(ii), b-(iii), c-(iv), d-(i)
- (2) a-(i), b-(ii), c-(iii), d-(iv)
- (3) a-(ii), b-(iv), c-(i), d-(iii)
- (4) a-(ii), b-(i), c-(iii), d-(iv)

Sol. Answer (1)

188. Consider the following statements about biomedical technologies

- (a) During open heart surgery blood is circulated in the heart-lung machine
- (b) Blockage in coronary arteries is removed by angiography
- (c) Computerised Axial Tomography (CAT) shows detailed internal structure as seen in a section of body
- (d) X-ray provides clear and detailed images of organs like prostate glands and lungs

Which two of the above statements are correct?

- (1) a and b
- (2) b and d
- (3) c and d

(4) a and c

Sol. Answer (4)

Angioplasty not angiography is unblocking of blocked arteries. Radiograph produced by x-rays is just a shadow of the dense body parts.

189. Which one of the following pairs of codons is correctly matched with their function or the signal for the particular amino acid?

- (1) UUA, UCA - Leucine
- (2) GUU, GCU - Alanine
- (3) UAG, UGA - Stop
- (4) AUG, ACG - Start / Methionine

Sol. Answer (3)

UAA, UAG and UGA are nonsense or terminating or stop codons as these are responsible for the termination of translation.

190. Which one of the following is the correct statement regarding the particular psychotropic drug specified?

- (1) Barbiturates cause relaxation and temporary euphoria
- (2) Hashish causes after thought perceptions and hallucinations
- (3) Opium stimulates nervous system and causes hallucinations
- (4) Morphine leads to delusions and disturbed emotions

Sol. Answer (2)

Morphine is both a sedative as well as analgesic drug. Barbiturates are sedatives and have hypnotic effect. Opium is also a narcotic drug which has a depressing effect on CNS.

191. Cry I endotoxins obtained from *Bacillus Thuringiensis* are effective against

- (1) Boll worms
- (2) Mosquitoes
- (3) Flies
- (4) Nematodes

Sol. Answer (1)

Proteins encoded by the genes cry I Ac and cry II Ab control cotton bollworm.

192. Modern detergents contain enzyme preparations of

- (1) Thermophiles
- (2) Acidophiles
- (3) Alkaliphiles
- (4) Thermoacidophiles

Sol. Answer (2)

Enzymes used in detergents are proteases and lipases, which are obtained from fungi. Fungi grows properly in acidic medium.

193. The linking of antibiotic resistance gene with the plasmid vector became possible with

- (1) Exonucleases
- (2) DNA ligase

- (3) Endonucleases
- (4) DNA polymerase

Sol. Answer (2)

Restriction endonucleases act as molecular scissors; but DNA ligases help in linking foreign DNA to plasmid.

194. Which one of the following proved effective for biological control of nematodal disease in plants?

- (1) *Paecilomyces lilacinus*
- (2) *Pisolithus tinctorius*
- (3) *Pseudomonas cepacia*
- (4) *Gliocladium virens*

Sol. Answer (3)

195. Main objective of production/use of herbicide resistant GM crops is to

- (1) Reduce herbicide accumulation in food articles for health safety
- (2) Eliminate weeds from the field without the use of manual labour
- (3) eliminate weeds from the field without the use of herbicides
- (4) Encourage eco-friendly herbicides

Sol. Answer (2)

As herbicide resistant GM crops will remain unaffected to the herbicide used, while the weeds will get killed.

196. Consider the following four measures (a - d) that could be taken to successfully grow chick-pea in an area where bacterial blight disease is common

- (a) Spray with Bordeaux mixture
- (b) Control of the insect vector of the disease pathogen
- (c) Use of only disease-free seeds
- (d) Use of varieties resistant to the disease

Which two of the above measures can control the disease?

- (1) (a) and (d)
- (2) (b) and (c)
- (3) (a) and (b)
- (4) (c) and (d)

Sol. Answer (4)

Bordeaux is used to control fungal diseases and no insect vector is reported for bacterial blight disease. Thus use of disease free seeds and disease resistant varieties can control disease.

197. Human insulin is being commercially produced from a transgenic species of

- (1) *Saccharomyces*
- (2) *Escherichia*
- (3) *Mycobacterium*
- (4) *Rhizobium*

Sol. Answer (2)

Eli Lilly was the first American Company to launch genetically engineered insulin called as humulin. They prepared two DNA sequences by reverse transcription of their m-RNA and linked them separately with the modified plasmid of Escherichia coli.

198. Cornea transplant in humans is almost never rejected. This is because

- (1) It is a non-living layer
- (2) Its cells are least penetrable by bacteria
- (3) It has no blood supply
- (4) It is composed of enucleated cells

Sol. Answer (3)

Cornea can be easily transplanted because it has no blood supply & therefore, does not involve immune response.

199. Which of the following pairs of organs includes only the endocrine glands?

- (1) Adrenal and Ovary
- (2) Parathyroid and Adrenal
- (3) Pancreas and Parathyroid
- (4) Thymus and Testes

Sol. Answer (2)

Testes, Ovaries and Pancreas have both exocrine and endocrine functions; but Parathyroid and Adrenals have only endocrine function.

200. What is antisense technology?

- (1) RNA polymerase producing DNA
- (2) A cell displaying a foreign antigen used for synthesis of antigens
- (3) Production of somaclonal variants in tissue cultures
- (4) When a piece of RNA that is complementary in sequence is used to stop expression of a specific gene

Sol. Answer (4)

Antisense technology is the translational control of protein synthesis which involves use of RNA which is complementary to m-RNA, inhibiting the expression of genes.
