It is hard to think of an Indian snack that is not fried. However, we need to be aware of what happens to oil when it is heated. When oil begins to smoke, it is a good indicator that it has been heated too much. At this temperature, chemical changes begin to take place, which has many health risks. Of course, this tricky. It the oil is not hot enough, then more of it is absorbed, and the resultant product is quite soggy and unfit to eat. Further, prolonged heating of oil at high temperature, i.e. at its smoking point, leads to it degradation. A substance called acrolein is formed which can irritate the stomach lining. The oil that has decomposed to acrolein to dark and viscous. Normally this does not happen when food is fried at home. But as oil is expensive we are not willing to put it down the drain after having used it only once. The common tendency is to set aside any oil that is left over to use another time. And repeated use of the same oil guarantees the formation of acrolein with all its undesirable effects.

In fact, some experts suggest that oil should not be held at its smoking temperature for more than 15 minutes at a time. This time span, as everyone knows, is hardly sufficient to prepare poor is for even a small family of four. Sadly, olive and corn oils are not widely available in our markets. Both these oils can be heated to higher temperatures before they start smoking.

Even heart-friendly oils, like those made from sunflower, are also not spared from these effects. Another problem arises when oil is stored under less than satisfactory conditions. If the oil is not stored in an airtight container which, additionally, allows light to pass through, then it will deteriorate further because of the effect of oxygen and light on the oil.

By and large, these undesirable effects result when food is deep-fried. So, eat deep-fried food occasionally. This does not mean we can no longer enjoy the flavour and palatability of fried foods. Some food like tikkis land themselves to both deep and shallow frying. Since every batch of frying requires fresh oil, there is no problem with leftover oil.

The practice of heating small amounts of mustard, black grams chillies and the like in a little oil, before they are added to vegetables and curries, is called tempering. Tempering is not meant solely for flavour but has a nutritional benefit as well.

Read tl	ne text carefully and answer the questions:

Since its creation in the 17th Century, insures have amassed polices in each class of risk they cover. Thanks to technology, insures now have access to more information about the risks that individuals run. Car insures have begun to set premiums based on how actual drivers behave, with "telematic" tracking devices to show how often they speed or slam on the brakes. Analysts at Morgan Stanley, a bank, predict that damage to insured homes will fall by 40-60% if smart sensors are installed to monitor, say, frayed electrical wiring. Some health insures provide digital fitness- bands to track policy holders vital signs – and give discounts if they lead a healthier life. But the data can only go so far. Even the safest driver can be hit by a falling tree: people in

[10]

connected homes still fall off ladders. But the potential gains from smart insurance are large. First, giving people better insights into how they are managing risk should help them change their behaviour for the better. Progressive, an American car insurer, tells customers who use its trackers where they tend to drive unsafely; they crash less often as a result. Second, pricing will become keener for consumers. The insurance industry made \$338 billion in profits last year. More accurate risk assessment should result in lower premiums for many policyholders. Third, insurers should be able to spot fraud more easily, by using data to verify claims.

Over the past 50 years, the US personal auto insurance market has not generally correlated to the economy.

Mckinsey & Company

But two worries stand out. One is a fear that insures will go from being with to ones that watch your every move. The other, thornier problem is that insures will cherry pick the good risks, leaving some people without safety net or to be taken care of by the state. Forgone privacy is the price the insured pay receiving personalised pricing. Many people are indeed willing to share the data, but individuals should always have to opt in to do so. Some worry that this safeguard may not be enough: the financial costs of not sharing data may be so great that people have no real choice over whether to sign up. The second concern is the worry that more precise underwriting will create a class of uninsurable people, selected out of insurers businesses because they are too high a risk.

For some types of cover, that would be a reasonable outcome. People who choose to drive like maniacs should have a hard time getting insurance. By the same token, it makes sense to offer rewards, in the form of discounts to premiums, to customers who behave well. Incentivising people to eat better, exercise regularly, drink in moderation and avoid smoking would reap huge health dividends. Where things get harder is with risks that individuals can not control. There are few things that people have less choice about than their genes. One option is to distort the market by requiring insurers to be blind to genetic data. In 2011, for example, Europe banned insurers from using gender to calculate annuities. Now that a man's shorter lifespans are no longer taken into account that has led to lower payments. Until the interplay between nature and nurture is better understood, it is right to be cautious. Insurers should be able to take note of customers' behaviour, but not exploit information from genetic testing. However, as data analysis and the understanding of genetics improve, that line will only become harder to hold.

Listening to them, I see two distinct worlds-one of the family, caught in a web of poverty, burdened by the stigma of caste in which they are born; the other a vicious circle of the *sahukars*, the middlemen, the policemen, the keepers of law, the bureaucrats and the politicians. Together they have imposed the baggage on the child that he cannot put down. Before he is aware, he accepts it as naturally as his father. To do anything else would mean to dare. And daring is not part of his growing up. When I sense a flash of it in Mukesh I am cheered. "I want to be a motor mechanic," he repeats. He will go to a garage and learn. But the garage is a long way from his home. "I will walk," he insists. "Do you also dream of flying a plane?" He is suddenly silent. "No," he says, staring at the ground.

- (i) Which two worlds has the narrator divided the people of Firozabad?
 - a. The exploited and the exploiters
 - b. The educated and uneducated
 - c. The dreamers and the crushers
 - d. The males and females
